

Jira - ScriptRunner로 Subtask 자동 생성

Script 작업하려는 Workflow Transition에서 Post Function 선택 후 "Script Post-Function" 선택

Script Post-Function [ScriptRunner]

Runs a script in a post-function, or a built-in script.

Create a Sub-Task 선택

Create a sub-task ?

Create a sub-task. Will optionally reopen a matching sub-task.

"Note", "Target Issue Type" 등을 선택 후 Update 선택

"Subtask Summary" 등 공백으로 둘 경우 상위 이슈의 값을 자동으로 가져옴

"Fields to Copy" 항목에 Copy 필요한 필드 입력

Add Parameters To Function

Add required parameters to the Function.

Create a sub-task

Create a sub-task. Will optionally reopen a matching sub-task.

Note

subtask

An optional note, used only for your reference.

Condition

SCRIPT

FILE

1

Show examples 

Enter the condition for which this function will fire. Blank will evaluate to "true". You can click one of the examples below, or see the wiki page for further examples.

Target Issue Type

Sub-task

Target issue type. Leave blank for the same issue type as the source issue.

NOTE: This issue type must be valid for the target project

Subtask Summary

Optionally set the summary. If blank it will be inherited from the parent.

This is useful in conjunction with automatic reopening of subtasks

Fields to copy

Priority 

Select system or custom fields that you want to be copied to the new issue.

Leave blank in order to copy all the fields

As User

Select user(s)

The user that will run as.

Leave blank in order to run using the current user
