

Powershell IIS 서비스 실행/중지 가이드

이 문서는 Powershell을 통해 IIS 서비스를 실행 및 중지하는 스크립트에 대한 정보를 공유한다.

- [Website/Application Pool 실행](#)
- [Website/Application Pool 중지](#)

Website/Application Pool 실행

```
$sitename="IIS"

Import-Module WebAdministration
if ((Get-WebAppPoolState -Name $sitename).Value -ne 'started'){
    Write-Output ('start Application Pool: {0}' -f $sitename)
    start-WebAppPool -Name " $sitename"
}

Import-Module WebAdministration
if ((Get-WebsiteState -Name $sitename).Value -ne 'started'){
    Write-Output ('start Website: {0}' -f $sitename)
    start-Website -Name " $sitename"
}
```

Website/Application Pool 중지

```
$sitename="IIS"

Import-Module WebAdministration
if ((Get-WebsiteState -Name $sitename).Value -ne 'Stopped'){
    Write-Output ('Stopping Website: {0}' -f $sitename)
    Stop-Website -Name " $sitename"
}

if ((Get-WebAppPoolState -Name $sitename).Value -ne 'Stopped'){
    Write-Output ('Stopping Application Pool: {0}' -f $sitename)
    Stop-WebAppPool -Name " $sitename"
}
```
